

KOIKE LEVEL GAUGE

Koike Aluminum Flange Level Gauge

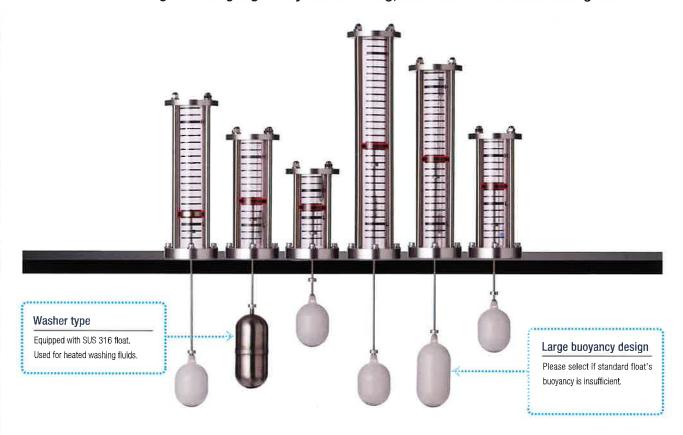

CLEAN LEVEL TOWER

Attached to the tank top with excellent visibility, the fluid level can be checked at a glance from any direction.

While maintaining the excellent "visibility," "strength" and "durability" were pursued.

With aluminum flange and 4 circumferential tie rods, durability has been remarkably improved. Prevention of damage on the gauge body ensures long, safe use on a manufacturing site.

Characteristics of aluminum flange type

Aluminum flange adopted

The flange material has been changed from reinforced plastics to aluminum. thereby considerably improving the attachment strength.

Pipe damage prevention structure

By using 4 circumferential tie rods for preventing damage on the gauge body, the pipe is securely protected from external shock.

Sealed structure prevents fogging

Sealed structure prevents fogging inside the pipe from moisture, keeping good visibility at all times.

Easy replacement

The attachment dimensions are the same as the preceding CLT models, enabling easy replacement which requires only changing the position of attachment hole. Compatible also with the automatic switches and proximity switches (M18)-
